Anti Counterfeit Protection

Microtrace, a manufacturer of traceable anti counterfeit taggant technologies, has announced enhancements to their Microtaggant® technology as well as the availability of several ready-to-use solutions for product security / brand protection. Taggants are uniquely encoded for each customer or application and are used to address issues of counterfeiting, product liability / warranty and other product security / brand protection issues in a variety of industries. In the plastics industry, the anti counterfeit technology is compounded into a masterbatch for easy processing into packaging materials.

In its basic form, the Microtaggant is a unique numeric code sequence in a multiple coloured layer format. In its more complex form, it delivers multiple layers of security through the incorporation of several nano / taggant technologies in a single microscopic particle. For more information visit www.microtracesolutions.com.

Authenticity. Identity. Security. Worldwide Solutions since 1985.

Eco-friendly packaging for lubricants and fluids

Johnsen & Jorgensen's innovative SmartPack 'bag-in-a-box' packaging system offers an eco-friendly packaging system that is ideal for all types of lubricants and fluids. The SmartPack system comprises of a rugged corrugated cardboard outer and a high tech double layer plastic inner. Which, due to the clever design and strength of the inner bag, squares-up when they are filled, so that SmartPack does not rely on external packaging to stay in shape. Moreover, the durable corrugated

Nord Gear launches new inverter

Nord Gear's new SK 200E frequency inverter range combines a sensorless current vector drive with comprehensive control and communications features in a compact IP 55 or IP 66 rated enclosure. Covering the 0.25 to 7.5 kW power range with single phase 110V and 230V and three-phase 400V AC supply, the compact and rugged unit may be directly mounted to a wide choice of Nord high-efficiency motors and gear motors for maximum decentralised potential - or supplied as a near-motor mounted alternative. Although aimed at price-sensitive applications in conveying and factory automation, the new SK 200E includes a wealth of sophisticated standard features, modules and options allowing the user to select only those necessary for the application - keeping costs to a minimum yet preserving the possibility to upgrade performance and scaling by adding additional modules as

required. For more information call +44 (0)1235-534404 or visit www.nord.com.

Exante weight-loss supplies

Women who are losing the pounds and counting the pennies have snapped up supplies of the latest meal replacement diet products. Exante Diet has had to increase its production to fulfill the huge rise in orders as bargain-hunting Brits fight the battle of the bulge on a budget. 'Since December, we just haven't been able to keep up with demand for our soups, shakes and bars,' says Jackie Delahunty, diet expert and director of www.ExanteDiet.com. 'Customers turn to Exante for the price but stick with it because of the great taste and the fact that it's 100% nutritionally complete.' For more information visit www.exanteinc.com.

NEW Toshiba modular terminal

TOSHIBA has introduced the new WILLPOS B20 modular terminal. Energy saving yet powerful, it is designed to reduce environmental impact and perfect for retailers who wish to protect their existing IT investments, minimise downtime and have a cost-efficient upgrade in the future. Providing flexibility and scalability to meet even the largest retailer's point-of-sale requirements, the WILLPOS B20 has been designed to include a powerful Intel® Celeron® M processor 945GME resulting in a highly stable Point-of Sale platform. This faster processing time not only improves customer throughput, but guarantees a future-proofed solution for any potential changes in application software platforms. For more information visit www.toshibatec-eu.com.
